Reviews

These types of ebook is the best book available. It really is written in easy terms instead of hard to understand. You will like just how the article writer created this book.
(Krista Nitzsche Jr.)

LUCIEN BONAPARTE ET SES MEMOIRES, 1775-1840 D'APRES LES PAPIERS DEPOSÉS AUX ARCHIVES ÉTRANGÈRES ET D'AUTRES DOCUMENTS INÉDITS . (3)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 142 pages. Original publisher: Reston, Va. : U. S. Geological Survey, 2007. OCLC Number: (OCoLC)122259909 Subject: Eolian processes -- Arizona -- Grand Canyon. Excerpt: . . . can be used to identify rainfall events that caused gully incision and to predict aeolian sediment redistribution, thus aiding other sedimentary and geomorphic studies of sediment deposits in the river corridor. Quantifying wind magnitude and direction was essential for identifying sediment-transport pathways in the vicinity of the study locations, information used subsequently to evaluate the potential sensitivity of certain sites to dam operations. Detailed discussions of the data collected at the weather stations, as well as electronic data files, were published by Draut and Rubin (2005, 2006). Nine weather stations operated in the Colorado River corridor in Grand Canyon as part of the aeolian sediment-transport investigations. Locations of instrument stations are shown in Figure 1. Three sites located in eastern Grand Canyon, at 24. 5 mile, Malgosa (river-mile 57. 9), and Palisades (river-mile 66. 1), were equipped with two weather stations between November 2003 and January 2006. One instrument station operated at each of three additional sites: Comanche (river-mile 68. 0) in eastern Grand Canyon, and Forster (river-mile 123. 0), and 202. 9 mile in western Grand Canyon, between April 2004 and January 2006. The weather stations were deployed in areas known to contain cultural artifacts but located such that the presence and operation of equipment would not disturb the sites. Analysis of aerial photographs indicated that all six study sites had experienced a reduction in open sand area after Glen Canyon Dam was constructed, and that all sites experienced new deposition as a result of the 1996 high-flow experiment (...)
